

GOPi KUNCHALA

Data Engineer - 3 Years

Hyderabad, Telangana, India | gopi.sk079@gmail.com

PORTFOLIO

CORE COMPETENCIES

Languages:

Python (pandas), SQL, PySpark, PowerShell

Cloud:

Azure Data Factory, Databricks, Snowflake, ADLS, Teradata

Tools:

ServiceNow, Control-M, Azure Log Analytics, SSMS, Unix

Processes:

ETL/ELT, Data Validation, Data Quality, Workflow Automation, CI/CD

EDUCATION

TKR College of Engineering & Technology

Jun 2016 – May 2019

Diploma in Mechanical Engineering

Graduated with 81.89%

Avanthi's Scientific Technological & Research Academy

Jun 2019 – Jul 2022

Bachelor of Technology in Mechanical Engineering

Graduated First Class

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (Verify)
- Microsoft Certified: Azure Data Engineer Associate (Verify)
- Databricks Certified Data Engineer Associate (Verify)
- Databricks Accredited Lakehouse Platform Fundamentals (Verify)

LANGUAGES

Telugu, Hindi, English

Available for new opportunities - **Project Interests:**

Data Engineering Projects
Data Warehousing Projects
Data Migration Projects
Data Integration Projects
AI/ML Projects

PROFESSIONAL SUMMARY

Results-driven Data Engineer with 3 years of experience specializing in Azure cloud platforms, ETL/ELT development, and data pipeline optimization. Proficient in PySpark, SQL, and Python for building scalable data solutions. Strong expertise in Azure Data Factory, Databricks, and Snowflake with a proven track record of optimizing data processes and implementing automation solutions. Microsoft Azure certified professional with excellent problem-solving skills and ability to handle complex data engineering challenges in fast-paced environments.

WORK EXPERIENCE

Tata Consultancy Services

June 2023 – Present

Data Engineer

Hyderabad, Telangana

- Delivered 45+ various Root Cause Analyses (RCA) for critical production issues with detailed investigation reports
- Completed 50+ problem investigations and implemented fixes to resolve complex data pipeline challenges
- Executed 30+ safe production deployments including both code fixes and configuration changes with zero downtime
- Optimized SQL queries to improve performance and reduce execution time across data pipelines
- Developed PySpark and SQL notebooks to implement smooth data transformations for Snowflake and Delta tables loading
- Led cross-team platform initiatives to implement cloud-based Control-M level automation and job scheduling
- Implemented code fixes in shell scripts to resolve automation issues and improve reliability
- Developed large file handling solutions in ADLS Gen2 for efficient renaming and data management
- Introduced pandas-based workflows to generate automated solutions for regular data tasks
- Analyzed critical production issues and resolved them within quicker SLA timeframes
- Handled critical production challenges and performed deep analysis to maintain data load stability

KEY ACHIEVEMENTS

- Reduced production errors by 80% in weekly trend analysis through root cause analysis and permanent fixes for recurring issues
- Developed mount issue error fixes to prevent recurring Databricks mount failures and ensure data availability
- Standardized incident management process, achieving 90% reduction in recurring production incidents
- Accelerated large file data movement within Databricks mounts, enabling efficient migration of multi-terabyte datasets
- Implemented no data loss ingestion framework ensuring 100% data integrity during large-scale migrations
